RICHARDSON TIMBERS

Custom Timbers Since 1949

Kerto LVL

Kerto LVL is a structural laminated veneer lumber engineered for strength, rigidity, dimensional stability and light weight. Made from strength-graded softwood veneers bonded into strong, consistent members, it is well suited for demanding structural applications.

- Strong and rigid with excellent strength-to-weight ratio.
- Dimensionally stable with improved resistance to warp and twist.
- Long spans with minimal deflection.
- Easy to machine, fasten and install using conventional woodworking tools.
- Suitable for beams, headers, joists, rafters, studs, columns and roof, floor and wall components.

Engineered for dependable structural performance with strength, stability and efficient installation.

Kerto LVL Applications

- Beams and headers
- Floor joists
- Rafters and ridge beams
- Studs and columns
- Roof, floor and wall components
- Portal frames
