RICHARDSON TIMBERS
Custom Timbers Since 1949

TRU-RUF™ SURFACING *is an addition to rough timbers, green or kiln dried, that provides a unique texture to the timber.*

For the dealer, this means a product upgrade that removes common material handling problems like band marks or strap marks from sawmill handling, weather or mill stains during order fabrication. TRU-RUF™ SURFACING can be used on any species of wood …. Fir, Cedar, Cypress and many more.

Before TRU-RUF™

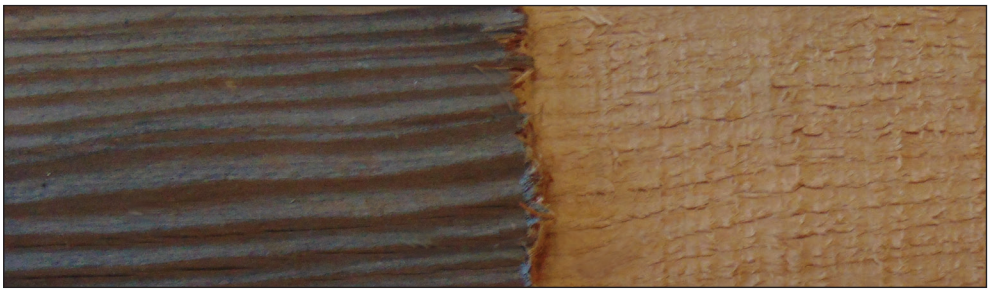

After TRU-RUF™

For your customer, TRU-RUF™ SURFACING means a job site ready product requiring no site touch up before installation, but with a textured finish the consumer expects. All four surfaces are usable every time.

Because a TRU-RUF™ timber provides greater customer satisfaction, costly material returns are greatly reduced, and customers will ask for that special surface on all their orders.

When the job needs a special timber and that extra finish to insure customer satisfaction, let the TRU-RUF™ SURFACING make the difference.
